Project description
Part#1: Sotware Technical Review

I. Description

Review the given pieces of code (in Java) using the provided Java Code Review Checklist.
(It is a short version modified from the original one of TMA Solution company. The short version is made without any agreement from TMA and for teaching purpose only. Sorry about that!)

Use the template "Code Review Report Sample.xlsx" to report all faults/errors/mistakes you may find and make a .pdf report about the review process and your suggestions.

II. Workload policy
- A source file is reviewed by one student and validated by another
- Team work is to share experiences, not to allow one to cover another one's job

III. Report
- Represent your team workload (task assignments/member contribution) and the summary of your team work (meeting, …) in a .pdf file.
- Represent your review detail in a .xlsx file (using the given template).

IV. Submission
- Submit your report in .pdf file and .xlsx file.
